

## When security, performance, and reliability are mission-critical, only a wired connection will do.

Wireless sync has become the norm, but some use cases are still best served with wired connections:

- Compliance with HIPPA and other data security regulations is often easiest to achieve with a wired connection for data transfer.
- Environments with high levels of interference or electromagnetic noise (like the factory floor) can make wireless connections inconsistent or impossible.
- When a high speed, instant-on connection is a must-have.

Portsmith has the solution. We offer multiple USB-Ethernet adapters for enterprise workflows.

### Desktop USB—Ethernet

Transform a USB cradle into an Ethernet cradle in minutes with the PSA1U1E

### Rugged USB to Ethernet

Connect a field grade device to wired Ethernet with the rugged PSA1U1E-E (USB-A) and PSA1uB1E-E (micro-USB)

### USB-C to Ethernet

Ultra high speed Gigabit Ethernet with concurrent charging. Coming mid-2018.
